HYALURON

Anti-Aging

Perfectly matched ingredient cosmetics

Hyaluronic acid, the fountain of youth

DEVEE HYALURON products are designed with a precise goal in mind: to retain the skin's youthfulness. A high concentration of natural hyaluronic acid in low- and high-molecular-weight form smoothes and firms the skin.

There is hardly a better alternative for keeping skin younger and fresher-looking while providing high-quality care. Particularly the combination of high- and low-molecular-weight hyaluronic acid lends this extremely effective active ingredient a special quality and an outstanding singularity among active ingredients in today's anti-aging products. The coordinated formulas are developed and produced in research and development laboratories located exclusively in Germany. It is no accident that hyaluronic acid is the first choice when it comes to skin with peak vigour and elasticity and optimum moisturising. After all, even aesthetic-plastic medicine devotes great attention to the use of biotechnologically derived, highly purified hyaluronic acid.

Good to know!

As it ages, the body is unable to continue producing sufficient quantities of hyaluronic acid. Physical factors and harmful environmental conditions accelerate this natural process. Hyaluronic acid has a very high hydrophilic potential – a fact that has been scientifically proven. This substance produced by the body can bind up to 30 times more water than the volume of the skin cells themselves. It also promotes cell growth and regeneration of the skin. If the skin's function as a natural barrier has been disrupted, its receptivity to moisture subsides as harmful external influences promote wrinkling of the skin. An intact protective skin barrier, on the other hand, means that the components of the cell membrane are in balance and serve as a kind of 'bonding putty' that firms the outer layer of skin. This is the only way for skin regeneration to proceed optimally – the precondition for an even, smooth and supple-soft skin.

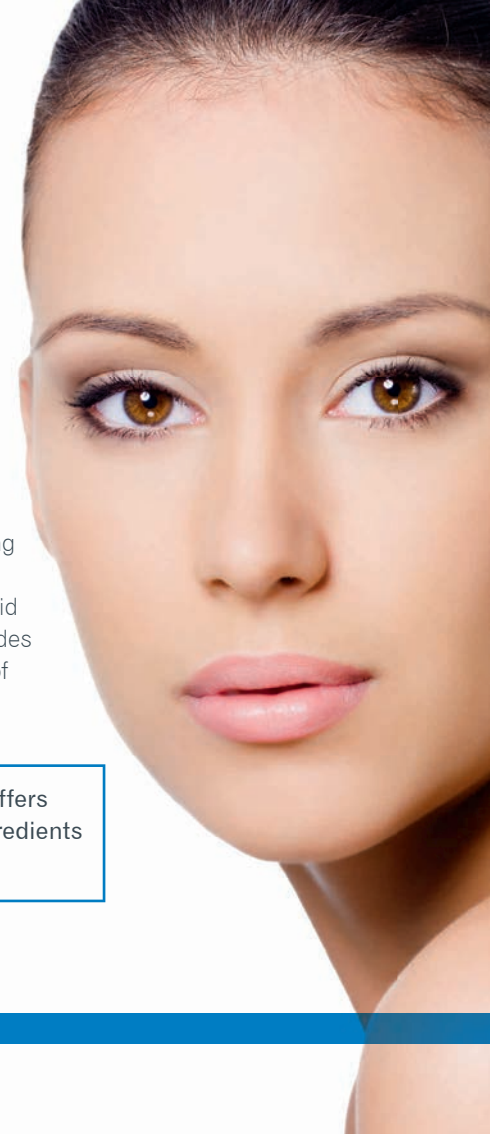

Six ways to trust DEVEE

Your trust in **DEVEE** products can build not only upon the wonderful feeling you get when applying them but also upon the convincing results that the six premium references can offer. If expression lines are naturally smoothed, the skin generally is firmed and the complexion is visibly improved, your appearance looks younger, healthier and radiant.

An absolute asset for hyaluronic acid: It produces immediate results!

Because the top layers of the skin receive intensive care with hyaluronic acid, surface lines subside, leaving the skin smoother and fresher looking. It can bind moisture like a sponge: just one gram of hyaluronic acid can store an entire litre of water. Hyaluronic acid provides volume by binding sufficient moisture on the surface of the skin. It also leaves an air-permeable film behind to prevent the skin from drying out.

DEVEE, the high-quality brand made in Germany, offers you a luxurious cosmetic treatment with active ingredients that produce visible effects.

HYALURON

Platinum Serum Concentrate

This highly concentrated, anti-wrinkle serum combines high- and low-molecular-weight hyaluronic acid with long-term protection against environmental influences and the effects of UV light. This provides intensive support for regeneration of the skin.

Derived biotechnologically from natural sugars and yeasts, the „intelligent“ active ingredient enters into a protective interaction with your skin, helping protect it from the harmful effects of the environment. To produce an ideal balance of hyaluronic acid in your skin, another biotech active ingredient also hydrates your skin in the deeper layers of the epidermis. It helps stimulate synthesis of the skin's own elastin and hyaluronic acid. It also has the capacity to improve the viscoelastic properties of your skin.

The result is a complexion full of suppleness, strengthened against harmful external influences and equipped with an improved ability to regenerate on its own. Expression lines and wrinkles appear visibly and tangibly reduced.

Apply beneath the skin-care cream in the morning and/or evening.

HYALURON

Super Gel Concentrate

An intensive-care, unscented concentrate in gel form, this anti-aging product contains an extraordinarily high concentration of hyaluronic acid for use in your daily skin care.

The firming effect can be seen and felt soon after application:

successful smoothing of wrinkles is measured in terms of both immediate results and long-term effects.

The gel also contains urea – a natural substance that improves the moisture-retaining capacity of the horny layer and, most importantly, significantly improves receptivity to other active ingredients, in this case the high concentration of hyaluronic acid. Emollient components such as allantoin and panthenol complete this modern formula, creating a skin-care experience that offers you clear anti-aging benefits and is responsible for the radiant, youthful appearance of your skin.

Super Gel Concentrate is ideally suited to correcting the visible signs of skin aging while smoothing your overall complexion.

Apply mornings and/or evenings after daily facial cleansing, gently rubbing in, then apply the appropriate care product on top.

HYALURON

Hydro Creme Concentrate

This cream is an indispensable product for daily skin care with hyaluronic acid. It, too, contains a particularly high concentration of the valuable and scientifically recognised active ingredient to combat aging of the skin.

If the skin's moisture levels are successfully regulated, it can immediately look considerably fuller and smoother. Protected by the air-permeable, supple film that the hyaluronic acid forms on your epidermis, your skin can present itself with a youthfully fresh appearance, each and every day.

The cream also contains valuable oils of vegetable origin to help the cream provide your skin with optimal care. These oils offer your skin the valuable lipids it needs. Vitamin E and panthenol protect the cells and promote cell growth. The combination of excellent moisture management, elemental active skin-care ingredients and an unobtrusively floral-fruity fragrance account for the quality of this cream while treating you to perfect care of your complexion.

Apply mornings and evenings after cleansing the face. If needed, a combination with other DEVEE products is highly recommended.

HYALURON

Moisture Active Effect Concentrate

Concentrates of active ingredients that provide intensive care and an added kick are integral to a premium skin-care line such as **DEVEE**.

They combine highly concentrated, pure active ingredients that develop their effects directly on the skin. A gentle, floral-fruity aroma adds to the effectiveness.

DEVEE HYALURON relies on highest-quality high- and low-molecular-weight hyaluronic acid; because hyaluronic acid is a native product of the skin, it is absorbed particularly well. An immediate effect takes hold in a valuable combination of hyaluronic acid and minerals. Thanks to this maximum supply of moisture, the skin looks visibly smoothed, full and refreshed. Even noticeable wrinkles due to dryness look softened and markedly reduced as the skin presents itself in an ideal condition.

Apply the contents of an ampoule mornings and/or evenings after cleansing the skin, gently pressing it in. Optimum results with maximum moisturization are achieved if the concentrates are applied either daily or weekly as a cure.

HYALURON

Eye Lifting Fluid Concentrate

A special product for the care of skin around the eyes, with concentrated active ingredients tailored to the requirements of your tender, sensitive and at times heavily strained skin regions around the eyes. It flows smoothly over the skin, where it is absorbed particularly quickly. Thai ginger supplements the valuable moisturising effects of the main active ingredient, hyaluronic acid: it delivers an extract that optimises the supply of moisture to the skin cells while additionally stimulating the skin's own production of hyaluronic acid. Natural fillers in microcapsule form can fill in lines and expression lines. The result is a volume created from within, with an immediate, wrinkle-filling 3-D effect. Shadows around the eyes are reduced, and thanks to the drainage properties any tendency to swelling is diminished. These anti-aging active ingredients stand up to the natural aging of the skin. They even out the texture of the skin and help minimise swelling, smile lines, redness and stress-based irritations of the skin. Eye Lifting Concentrate pampers the skin with a gentle, floral-fresh fragrance.

Apply mornings and/or evenings to cleansed skin. There is also nothing against applying the product at other times, once in a while – whenever the area around the eyes is tired and needs new clarity! Simply gently pat beneath the eyes during the day.

HYALURON

Moisturizing Body Lotion

Light, creamy body lotion. The pleasant texture cares for the skin while providing intense moisturizing. The formula with hyaluronic acid and maximum skin-care components made from macadamia nut oil and vitamin E has multiple effects: it improves skin elasticity, protects against free radicals and regulates moisture levels. With a gentle fragrance, it pampers the skin and leaves it feeling pleasantly velvety.

Apply to the body and gently massage into the skin. Use after showering/bathing or whenever needed.

HYALURON

Platinum **Serum** Concentrate

High-concentration serum with a high level of protection and anti-stress potential for the reduction of expression lines. Provides smooth, supple skin full of elasticity and vigour.

- hyaluronic acid, high- and low-molecular-weight
- biopolysaccharides
- Optim Hyal™

30 ml dispenser

HYALURON

Super **Gel** Concentrate

Intensive anti-aging concentrate in gel form with an extraordinarily high concentration of hyaluronic acid for the correction of all signs of natural skin aging.

- hyaluronic acid
- urea
- panthenol
